

Ear Piercing

Important After Care Instructions

1. **Never** touch your ears without washing your hands thoroughly.
2. Wash your hands and thereafter your newly pierced ears (on both sides) with liquid soap and clean running water twice a day. Dry with a Kleenex or Q-tip/ *DO NOT* remove the earrings.
3. Make sure that your newly pierced earrings are always kept clean, dry and airy.
4. Cover your ears when you are applying hair spray, spray perfume, hair-dye etc.
5. Take extra care when you put on or remove clothes over your head, to prevent the earring from getting caught.
6. After about **8-10 weeks** we recommend that you carefully remove the ear piercing earrings- preferably after having a shower or hair wash.
7. Be careful when you put new earrings with thinner posts in, for example Blomdahl Caring Jewelry, which are available in the same materials as the ear piercing earrings. The earrings, as well as the hands that hold them, should be carefully washed.
8. Wear earrings the whole time during the first year after ear piercing. If you go without the holes can shrink and grow together.
